Task Sheet for back-end

1. Take four string or integer entry from form, where first entry is integer. Square that integer and add that as suffix of each entry and print the output.
    example-
    Input in form-
    ```
    2
    sketch
    my
    room
    ```
    Output-
    ```
    24
    sketch4
    my4
    room4
    ```

2. Upload file in a form which have multiple string as statement and then sort the string according to there length. The result needs to be shown as plain html, additional css can be used, but the actual sorting logic should be in php only.
    Input in file-
    ```
    I promise myself not to use google for answering question.
    Really..?
    sketchmyroom is interior designing site.
    I am going to be part of sketchmyroom Technical team.
    ```
    Output in file-
    ```
    sketchmyroom is interior designing site.
    I am going to be part of sketchmyroom Technical team.
    I promise myself not to use google for answering question.
    Really..?
    ```

Submission

It is preferred that you create a git repository for the project, hosted on github/gitlab/bitbucket or your own git host of choice. If so, the following SSH key should be allowed clone/read access on the repository:

```
ssh-rsa
AAAAB3NzaC1yc2EAAAADAQABAAABAQC4N5S+hQcj2U2ubkBUdAPIwB61H65gu+toFITaf7VEvjwJpist9bXlcQm
q8ogpp6KihwBjbKA3CON1AVgDt7Z7QrGABSk9FuXe0UNCQ7FW2cjtXfZNDSI7ky5NLhQ5VoVru71fNB2go4cHTI
opekCkheu6hh9YWWd0pg87OjCFZ2s+7ziYs9EIkY5Fnbe/4SYc2lxB2e90zCODJ64gK409VfUvppaipihU/fB++
lNQSrNpZLll4930nxtWK5px4zpzfzPWWBsvdlAqb5O2RNNLrP6ybzxim4zaahyuhoxLjR+cxy4i+1T2s2HR2B/r
7/R13AlL2zgYjgVRRxajMuPp tech@sketchmyroom.com
```

Once the task is finished, respond back with the link to clone the repository. If unable to comply with the git part, create a zip/rar/7z/tar.gzarchive of the project, and attach it to your message. Do mention the libraries and frameworks you've used. If deploying the project requires some dependencies, please mention them in an accompanying ReadMe file.
